

European Council Regulation (EC) No 1/2005 regarding the handling of animals includes a provision about the duration of a shock from an electric prod. Regarding “instruments which administer electric shocks,” the regulation states, “...Shocks shall last no longer than one second...”

This DuraProd™ was designed to be compliant with these regulations. It contains a red light on the handle (shown in the picture at right) that lights up to indicate when the power is surging through the prod. This light then goes off when the power stops, one second later.

IMPORTANT

For best results with this specially designed Limited Duration DuraProd™, do not press the trigger until the prod makes contact with the animal. Otherwise, the power may turn off too soon and the prod will not be as effective in moving the animal.
